

Carbon Reduction Plan

Supplier name: Aiimi Ltd

Publication date: November 2021

Commitment to achieving Net Zero

Aiimi Ltd committed to and succeeded in achieving Net Zero emissions in 2020.

Baseline Emissions Footprint

Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction can be measured.

Baseline Year: 2019	
Additional Details relating to the Baseline Emissions calculations. This information was collected for the year 2019 and covered a period of time during which we were in a shared office in London. The emissions were higher due to the energy usage of that building. We chose to offset our carbon emissions to become carbon neutral from 2020 onwards by sponsoring a borehole project in Uganda.	
Baseline year emissions: 2019	
EMISSIONS	TOTAL 166.93 (tCO₂e)
Scope 1	6.10
Scope 2	45.81
Scope 3 (Included Sources)	115.02
Total Emissions	TOTAL 166.93 (tCO₂e) 206 (tCO₂e) offset to allow for error margin in data reporting

Current Emissions Reporting

Reporting Year: 2021 (data collected is for Jan to Dec 2020)	
EMISSIONS	TOTAL 79.73 (tCO₂e)
Scope 1	0.00
Scope 2	18.30
Scope 3 (Included Sources)	61.43
Total Emissions	TOTAL 79.73 (tCO₂e)

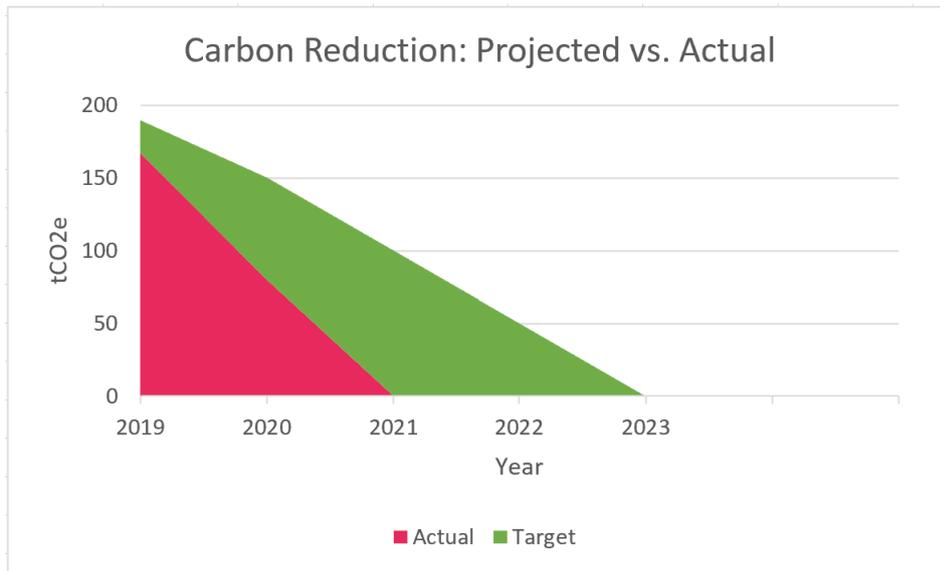

Emissions reduction targets

In order to continue our progress past Net Zero, we have adopted the following carbon reduction targets.

- Maintain a minimum of Net Zero (Carbon Neutral Plus)
- Reduce at source emissions under Scope 2 working in conjunction with Milton Keynes Council
- Reduce at source emissions under Scope 3 by promoting public transport, car sharing and electric vehicle leasing
- Removing the use of single use plastics from the office

We project that net carbon emissions will remain at or below zero for the next 5 years. We aim to have a one-off substantial and complete offset against estimated emissions from 2013 to 2020.

Progress against these targets can be seen in the graph below:

Carbon Reduction Projects

Completed Carbon Reduction Initiatives

The following environmental management measures and projects have been completed or implemented since the 2020 baseline. The carbon emission reduction achieved by these schemes equate to 206 tCO₂e, a 100% reduction against the 2019 baseline and the measures will be in effect when performing the contract

In the future we hope to implement further measures such as:

- Backdating our carbon emissions to 2013 when Aiimi was founded, with a dedicated team involved in this process.
- Become carbon negative in 2022.

Declaration and Sign Off

This Carbon Reduction Plan has been completed in accordance with PPN 06/21 and associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard¹ and uses the appropriate Government emission conversion factors for greenhouse gas company reporting².

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard³.

This Carbon Reduction Plan has been reviewed and signed off by the board of directors (or equivalent management body).

Signed on behalf of the Supplier:

A handwritten signature in black ink, appearing to read 'Darren Sproson', with a long horizontal flourish extending to the right.

Darren Sproson
